EUROPE SUSTAINABLE DEVELOPMENT DEVELOPMENT REPORT 2023/24

European Elections, Europe's Future and the Sustainable Development Goals Includes the SDG Index for the European Union, its member states, and partner countries

Acknowledgements

The *Europe Sustainable Development Report 2023/24* (5th edition) was prepared by a team of independent researchers at the UN Sustainable Development Solutions Network (SDSN) in collaboration with SDSN Europe and the European Economic and Social Committee (EESC). It builds on the methodology of the annual Sustainable Development Report, including the SDG Index and Dashboards. This year's edition aims to provide a useful contribution towards strengthening Europe's SDG leadership ahead of key European elections taking place in June 2024 and the Summit of the Future to be convened by the UN Secretary-General in September 2024.

The report was coordinated by Guillaume Lafortune, SDSN's Vice President and Head of its Paris Office, in collaboration with Adolf Kloke-Lesch (Co-Chair of SDSN Europe). Lead authors include Guillaume Lafortune, Adolf Kloke-Lesch, Grayson Fuller (SDSN), Phoebe Koundouri (SDSN Europe) and Angelo Riccaboni (SDSN Europe)., with major inputs from Phoebe Koundouri (SDSN Europe) and Angelo Riccaboni (SDSN Europe). Grayson Fuller led the statistical work, with support from Leslie Bermont Díaz, Juliana Torres Cortes and Samory Touré (SDSN). The report benefited from the support and active participation of the EESC and its member organizations. In particular, we would like to thank Peter Schmidt, Judith Carreras Garcia and Monica Guarinoni from the EESC, as well Maria Nikolopoulou and Antje Gerstein, rapporteur and co-rapporteur of the exploratory opinion on SDGs at the EESC. For their input and support at various stages, we also thank the Heinrich-Böll-Stiftung European Union office, and in particular Imme Scholz, Roderick Kefferpütz and Lisa Sandtner. We are grateful to Professor Jeffrey D. Sachs (SDSN and Columbia University) for his insights at various stages, and to María Cortés Puch, Andrija Erac, Zofia Kunysz, Gaëlle Descloitres, Eamon Drumm, Max Gruber, Ruben Andino, Alyson Marks and Sonja Neve at SDSN for outreach, dissemination, and communications support. For their inputs and active participation during the SDSN and EESC workshop on 08 November 2023, we thank Enrico Giovannini (ASVIS), Lucian Cernat (Secretariat General, European Commission), Gabriel Castañares (Spanish Presidency of the Council of the EU), David Donoghue (Fellow at ODI), Fabiana Maraffa (European Youth Forum), Ricardo Rio (Mayor of Braga) and Stefano Marta (OECD). We thank all the contributors and signatories of the joint statement / call for action published on 25 January 2024.

The Europe Sustainable Development Report is co-designed and co-created by and with civil society in Europe. This year's edition builds on three workshops and one online public consultation organized between April and November 2023. On 04 April 2023, the SDSN and EESC organized a hybrid workshop on 'How to Strengthen EU's leadership for the SDGs' which brought together more than 600 participants, including panellists from the European Parliament, the European Commission, current and incoming Council presidencies, civil society organizations, scientific institutions, and international organizations. Further workshops were held on 12 September 2023 (online) and on 8 November 2023 at the European Economic and Social Committee in Brussels (hybrid format), bringing together scientists, experts and practitioners from all over Europe. The opening chapter and joint statement also benefited from several rounds of consultations with partners.

The views expressed in this report do not necessarily reflect those of any organizations, agencies or programmes of the United Nations or the European Union. They may also not reflect the opinions of SDSN's Leadership Council members and their host institutions.

Pica Publishing Ltd provided design and editorial services and prepared the manuscript for publication.

Part 1.

Towards a new European Deal for the Future: Achieving the Sustainable Development Goals in a Fragmented and Multipolar World

Ten priority actions for the upcoming European elections and the next leadership of the European Union

In June 2024, the citizens of the European Union (EU) will not only elect the new European Parliament and chart the way to the formation of the next European Commission, both in charge until 2029, but also lay the foundations for the future of the EU and its global role well into the next decade. Political parties campaigning for the European elections and the future leaders of the EU have historic responsibilities. European citizens and civil society, political parties and European institutions need to enhance European democracy, social cohesion and prosperity within planetary boundaries and strengthen the EU's global engagement for a cooperative world order. Decisive actions must be taken in the EU and globally before 2030 to avoid irreversible environmental and dangerous social tipping points and to maintain a chance of attaining key global goals, including the 2030 Agenda with its 17 Sustainable Development Goals (SDGs) and the Paris Climate Agreement. The incoming EU leaders will also be responsible for determining the next EU seven-year budget (2028–2035) and negotiating the next global agenda for sustainable development to continue the SDGs beyond 2030.

In today's fragmented and multipolar world, the EU's leadership of global cooperation to achieve sustainable development is critical. **We identify ten priority actions** to accelerate SDG implementation in the EU and internationally and support a strong and unified EU response to today's geopolitical, social, environmental, technological, and financial challenges. We call on the political parties competing for the European Parliament to embrace these ten priority actions in their respective campaigns and platforms. These priority actions are **jointly directed at the next European Parliament, the next European Commission, the European Council, and the member states**.

A world in crisis calls for a new European deal for the future

In a world experiencing multiple overlapping crises, sustainable development faces strong headwinds, globally and in Europe. Geopolitical tensions, wars, and security crises in Ukraine, the Middle East, the Sahel, South Sudan and many other parts of the world are causing humanitarian disasters and represent major impediments to global cooperation. Humanity is eroding the biological and physical resilience of the Earth's systems. Scientific evidence points to increased likelihood of reaching dangerous and irreversible environmental tipping points during

Europe Sustainable Development Report 2023/24

this decade.¹ Around the globe, social cohesion is under pressure. Inequality, poverty, and hunger are mounting, contributing to societal polarization, populism, and unrest. Civil society, including academic institutions, is becoming more constrained amid intensifying political tensions. Challenging economic conditions and fiscal-space issues make it particularly difficult for low- and middle-income countries to respond to crises, and roughly half of the countries in the world lack the fiscal space needed to adequately invest in the SDGs. Over 50 countries, comprising 3.3 billion people, are in the grip of debt crises, spending more annually on debt service than on health care.² The international financial architecture is failing to channel global savings to SDG investments at the pace and scale needed.

Progress on sustainable development is strained in a world plagued by wars, terrorism, financial crises, and societal polarization. Yet the SDGs – adopted by all UN Member States in 2015 and oriented towards 2030 – provide a common agenda that can and should bring humanity together and help to chart a way out of these crises. The goals call for integrated actions to promote social and economic prosperity, environmental sustainability, and global cooperation. At the midpoint of the Agenda, however, none of the 17 SDGs are on track to be achieved globally by 2030.³ Of their 169 individual targets, 85% are declining or show insufficient progress.⁴

Despite these challenges, the SDGs still garner political traction both internationally and locally.⁵ Multiple UN assessments and academic studies have found that the goals are still financially and technically attainable. They remain the world's only globally accepted set of goals for sustainable development. In its September 2023 *New Delhi Leaders' Declaration*, the G20 reaffirmed its commitment to full and effective implementation of the 2030 Agenda and to accelerating progress towards the SDGs. And at the UN SDG Summit later that month, all Member States similarly resolved that the 2030 Agenda remains their overarching roadmap for achieving sustainable development and overcoming the world's current crises.⁶ In December 2023, at COP28 in Dubai, all countries present emphasized that the interconnected global crises of climate change and biodiversity loss must be addressed in the broader context of achieving the SDGs, including a call to transition energy systems away from fossil fuels to achieve net zero by 2050.7 Young generations all over the world are increasingly concerned about the consequences of climate change and want to hold governments and private companies accountable for their actions. The UN Summit of the Future: Multilateral Solutions for a Better Tomorrow, to take place in September 2024, aims to reinforce UN and global governance structures to better address old and new challenges and to formulate a 'Pact for the Future' to help advance achievement of the SDGs by 2030.8 The next UN SDG Summit is scheduled for September 2027.

What is really needed are <u>coalitions of</u> <u>thought leaders</u> who can build viable political coalitions to push for truly sustainable – and more-equitable – development, both globally and in Europe.⁹

Back in 2015, the EU and its member states demonstrated this kind of thought leadership when they championed the negotiations and eventual adoption of the 2030 Agenda and the SDGs, alongside the Paris Climate Agreement.¹⁰ Yet although some policy and technical agencies of the European Commission were mobilized to develop integrated SDG actions and monitoring processes, the EU and its member states initially dragged their feet when it came to implementing the SDGs.¹¹ While the European Economic and Social Committee (EESC) had called for a European 'Green and Social Deal' from the start, it wasn't until after the European Parliament elections in 2019 and the formation of the current Commission that the EU launched a truly ambitious transformation agenda, becoming – via the European Green Deal – the first continent to commit to achieving net zero emissions by mid-century.¹² In July 2023, the EU delivered to the UN its first

Europe Sustainable Development Report 2023/24

voluntary review of the EU's progress towards implementing the 2030 Agenda, including civil society contributions coordinated by the EESC.¹³ European regulations on sustainability are now frequently regarded as a global benchmark, influencing the behaviour of institutions, consumers, investors, businesses, farmers, NGOs, and social organisations.

However, the EU still needs to develop a comprehensive plan if it is to truly integrate the European Green Deal for a climate-neutral Europe, as well as other transformations, into a broader overarching strategy to achieve the SDGs, including their social and international dimensions, as repeatedly called for by the European Parliament, the EESC, and civil society at large.¹⁴ Targets, timelines, roadmaps and integrated long-term planning are required to clarify how the EU proposes to achieve the 17 SDGs in a holistic manner - rather than segmenting the goals to tackle them individually. In a step in the right direction, on 22 November 2023, the European Parliament adopted a series of amendments to EU Treaties aimed at strengthening SDG implementation within the EU and in the Union's external actions.¹⁵ These amendments incorporate more ambitious provisions to reduce global warming, safeguard biodiversity, promote non-discrimination and diversity, improve health and education outcomes, ensure full employment, and accelerate social progress.

As this report shows, insufficient progress has been made in Europe on the SDGs related to climate, sustainable food systems, and responsible production and consumption. The EU and its member states also score poorly on the International Spillover Index. For several years now, the SDSN and partners have documented the unequal progress on sustainable development *across* European countries – and convergence among them has stalled¹⁶ – while the Leave-No-One-Behind Index also highlights persistent gaps in living conditions and opportunities across population groups *within* European countries that must also be urgently addressed. Not only have the COVID-19 pandemic, the war in Ukraine, and geo-economic tensions shifted political priorities and financial resources in Europe, but societal fragmentation and political polarization are growing across the region, leading to pushbacks against more ambitious legislation in the EU to implement the European Green Deal and other policies that aim to promote social cohesion and equality.¹⁷ However, this is not the time to backtrack or water down what has already been agreed upon and accomplished. Instead, European citizens and political parties should use the upcoming elections to lay the groundwork for a new European Deal for the Future that responds to the multiple crises by deepening implementation of the Paris Climate Agreement and 2030 Agenda along with the SDGs in an ambitious, integrated, and coherent manner, including a longer-term perspective for the EU extending into mid-century.

We call on the incoming European Parliament, the next European Commission, and the European Council to adopt, within a year following the election, a Joint Political Statement reaffirming the EU's Commitment for the SDGs and preparing for the next decades of global sustainable development. In issuing this statement, the three pillars of EU governance would reaffirm their commitment to the 2030 Agenda towards achieving the SDGs in a fragmented multipolar world faced with multiple planetary, security, financial and societal crises. This would also send a clear and strong message to the rest of the world about the importance Europeans place on the universal SDG vision and framework. Furthermore, such a joint political statement should pave the way to outlining the EU's position on the global agenda for sustainable development post-2030 ahead of the next SDG Summit in 2027. The tasks of sustainable development - ensuring human wellbeing and security, social inclusion and justice, environmental sustainability, global cooperation, and peace - are not just tasks towards 2030. The EU played a vital role leading up to the adoption of the SDGs, joining key developing

Europe Sustainable Development Report 2023/24

countries to push for a truly global agenda for sustainable development that would call on all nations to transform themselves and the world. It should similarly be clear now about the necessity of pursuing an ambitious global agenda for sustainable development beyond 2030, possibly aligned with the Paris Climate Agreement, and oriented towards 2050. Just as the Rio+20 Summit of 2012 kicked off negotiations on the SDGs and the 2030 Agenda, the UN SDG Summit in 2027 will have to pave the way for a new deal on the future of people and the planet for the coming decades.

For the EU, we identify ten priority actions: addressing internal SDG priorities, the EU's international leadership, and how to get the job done:

1. Respond to the Grave Danger of Negative 'Social Tipping Points' – Significantly Reduce the Risk of Poverty and Social Exclusion of

European Citizens. Widespread public support is needed to carry out major transformations for sustainable development, including restructuring the economy towards sustainable and inclusive well-being and the transition to a more just society.¹⁸ Scientific evidence shows that humanity has breached safe planetary limits, necessitating urgent shifts in societal and economic structures to balance environmental stewardship with decent living conditions. Unless the SDGs are actively pursued, geophysical tipping points combined with technological disruptions could ignite disastrous social conflicts within and between nations. We must acknowledge the real risk of negative 'social tipping points', beyond which peaceful governance and co-existence break down, as they did during and between World Wars I and II. In this regard, a new European Deal for the future should incorporate ambitious climate and biodiversity targets as well as raising the ambition of social and economic targets - including to reduce at least by half the proportion of Europeans living in or at risk of poverty or social exclusion, as called for by SDG 1 (No Poverty) – as well as ensuring access for all to high-quality health care and education.

By building on the European Green Deal and the European Pillar of Social Rights, this strategy could lead to a truly integrated implementation of the SDGs and form a new 'European social contract'.¹⁹ The EESC In particular has long advocated for a European Green and Social Deal. The effective functioning of European democracies and institutions, which are at the heart of the sustainable development transition, depends on the capacity of EU leadership and member states to provide equal opportunities, protect the most vulnerable, and boost education and skills for all. The latest OECD/PISA results show a decline in learning outcomes of 15-year-old students, with only 7% in OECD countries (including many EU member states) reaching the highest proficiency levels in reading – a level that enables them to clearly distinguish between fact and opinion.²⁰ In this post-truth era, strengthening the European Education Area and enhancing science literacy should remain top priorities for the next European Commission, in combination with national education policy reforms. The new Social Partner Summit, to be jointly convened by the European Commission and the Belgian Presidency at Val Duchesse in the first half of 2024, should be used as a good opportunity to advance these strategic discussions and promote social inclusion as both an outcome and an enabler of sustainable development.

2. Double down Efforts to Achieve Net-zero Emissions in the EU by 2050, with Major Breakthroughs by 2030. The European Green Deal and the European Climate Law together established a clear pathway for decarbonizing the energy system in the EU: cut greenhouse gas emissions by 55% by 2030 (compared to 1990 levels) and achieve net-zero emissions by 2050. In 2019, the EU became the first regional organization to adopt a bold commitment to achieving net zero emissions domestically by 2050. Today, 150+ countries have some form of net-zero target.²¹ Investments in renewable energy generation (primarily solar, wind, geothermal, and hydropower) combined with the expansion of integrated and digital power grids can support a clean, efficient, and reliable

Europe Sustainable Development Report 2023/24

energy transformation in the EU – one that addresses the base-load issue and promotes the EU's strategic interests and security. Yet measures that delay or work against energysystem decarbonization, or that jeopardize the development of more sustainable food systems (farm-to-fork), weaken the EU's position internationally and potentially hamper global efforts to achieve the SDGs and the Paris Climate Agreement.²² Scientific tools already exist that can support this transformation, including the latest generation of integrated assessment models and pathways.* Several guidelines and regulations have also been produced to help companies align with the SDGs, including those in the food and land sector, responsible globally for more than a quarter of total GHG emissions.²³ In parallel, pathways and policy actions for climate adaptation and resilience within the EU should be strengthened.²⁴

3. Strengthen Regional and Local Authorities in Achieving the SDGs – Regularly Monitor and Report SDG Progress at All Levels.

The principle of 'subsidiarity' emphasizes the importance of tackling problems at the level closest to the intended outcomes. Sustainable development requires global cooperation and financing, for instance, to safeguard the Global Commons and deal with the costs of human-induced climate change in vulnerable countries. While nation-states still bear the greatest responsibilities for implementation of the SDGs, regional organizations such as the EU or ASEAN can support a massive scale-up of investments in major infrastructure, including in transportation and renewable energy grids, and reduce costs through increased regional integration and collaboration. According to UN estimates, 65% of the SDG targets cannot be

achieved without the involvement of regional and local authorities, who manage a large share of public investments).²⁵ The EU should encourage and develop the capacities of these subnational entities to implement the SDGs. Furthermore, it should push for monitoring progress on the SDGs at all levels. Ahead of the 2027 UN SDG Summit, the next European Commission should prepare a second voluntary review, based on participatory processes and extensive stakeholder engagement, to present the new European Deal for the Future to the international community as the EU's SDG action plan. Building on the excellent work of the Committee of the Regions and urban organizations, more voluntary local reviews of European regions and cities should also be prepared: capitalising on robust data systems including geospatial technologies and identifying specific policy and financing challenges that these subnational authorities face in implementing the SDGs.²⁶

4. Curb Negative International Spillovers and Support the Transformation Towards a Sustainable Trade System. The EU's

unsustainable consumption and supply chains continue to generate negative spillover effects on other countries.²⁷ For example, around 40% of the greenhouse gases caused by the EU are emitted abroad; the EU's consumption can be linked to 1.2 million people in forced labour and more than 4,000 fatal workplace accidents each year;²⁸ biofuel mandates in Europe and other major economies have accelerated tropical deforestation and land displacement in other parts of the world; and the export of toxic pesticides and waste lead to negative health impacts abroad. Macroeconomic and financial policies also generate negative spillovers, including through unfair tax competition, profit

^{*} The SDSN Global Climate Hub presented several reports during COP28 in December 2023 supporting the EU's strategic approach to SDG implementation: Modelling Net-Zero Pathways (Koundouri et al., 2023b) offers crucial insights into achieving net-zero emissions across EU countries, the UK, and the Balkans, serving as a vital guide for tailored climate strategies; Twin Skills for the Twin Transition (Koundouri et al. 2023a) outlines essential green digital skills and jobs needed for the net-zero transition, aligning with the EU's green and digital transformation goals; and the SDSN Senior Working Group's report, Transforming Our World: Interdisciplinary Insights on the Sustainable Development Goals (Koundouri et al., 2023c) provides an in-depth interdisciplinary analysis, crucial for shaping policies for an inclusive, green and digital recovery post COVID-19. These three reports collectively offer a comprehensive framework to bolster the EU's efforts in meeting the SDGs more effectively.

Europe Sustainable Development Report 2023/24

shifting and financial secrecy.²⁹ Transformative policies under the European Green Deal must be designed in ways that are not harmful to other regions, and that allow for jointly designed co-transformation. Building on efforts made by the current European Parliament, Commission and Council, notably via the adoption and implementation of the EU Due Diligence Regulation, future EU leaders must acknowledge, measure and curb negative spillovers and work closely with businesses and partner countries to foster more responsible production and consumption. Guided by the Better Regulation guidelines and toolbox, the EU should also increase efforts to include the SDGs in policy design and evaluation. The adoption of timebound targets on imported carbon-emissions (and other imported impacts) at the EU and member states levels would be an important step forward. Protective border measures should also be carefully designed to avoid the EU being accused of 'hidden protectionism'. In general, the EU and its member states should take active roles in driving forward the reform of the World Trade Organization and developing shared, sustainable trade rules for global prosperity, people, and planet.³⁰

5. Leverage Team Europe for Global SDG Diplomacy –Strengthen Diverse and Universal Formats Especially the United Nations. In a

world of multipolarity and multiple orders, the EU should turn its global role and broad networks into powerful tools of global transformation. Instead of pursuing narrow, short-sighted geopolitical and geo-economic narratives, the EU can bolster its long-term strategic autonomy by forging cooperative alliances with a diverse range of partners and aligning its external policies with the global common good, as exemplified and documented in the 2030 Agenda and its 17 SDGs.³¹ As the EU's external action should not operate in a strategic vacuum, the 2016 Global Strategy needs to be reviewed and reinvigorated.³² The 'Team Europe' approach must move beyond being an operational toolbox for the EU's and member states' engagement with partners, and be transformed into an

instrument of global SDG diplomacy.³³ As the mission of the SDGs calls for coalitions that work across geopolitical fault lines, effective alliances for the SDGs cannot be forged solely from within the EU and the G7. Instead, the EU and its member states should jointly strive to strengthen and reform diverse and global alliances and frameworks, and especially those of the United Nations. To ensure a successful 2024 UN Summit of the Future, the EU should work closely with its co-facilitators, the Permanent Representatives of Germany and Namibia to the UN, to advance multilateralism reform in support of sustainable development and future generations, foster enablers of SDG acceleration such as digitalization and access to finance, tackle obstacles to SDG implementation, and reinforce international standards conducive to the SDGs, including Beyond GDP.³⁴ The African Union's full membership in the G20, **turning the** G20 into a G21, is a significant step towards a more inclusive global governance. The EU should work closely with the G21 presidencies of Brazil (2024) and South Africa (2025) as well as the G7 Presidencies of Italy (2024) and Canada (2025), to bring the SDG agenda back on track. Within both groups, the EU, France, Germany and Italy should form a dedicated 'Team Europe for the SDGs' to work towards an open and cooperative international order that advances global sustainable development.

6. Step up Europe's Multilateral Role – Lead Global Efforts to Reform the Global Financial

Architecture. The EU should significantly step up its institutional role in the global financial architecture (the complex system of public and private finance that channels the world's savings to its investments) now and in the run-up to the fourth international conference on financing for sustainable development – the 2025 'Addis +10' conference. Although the EU and its member states provide close to USD 100 billion, or more than 45%, of global Official Development Assistance, EU institutions channel just 5 to 6 percent of this to the multilateral system, and almost exclusively as earmarked funding.³⁵ If the EU wants to strengthen a cooperative

Europe Sustainable Development Report 2023/24

world order and live up to its ambition as a global player, it should gradually become a major, core contributor to the multilateral system, both politically and financially – from the UN Sustainable Development Group to the Multilateral Development Banks. In this context, Team Europe must take a leading role in reforming the global financial architecture. Crucial to this will be a significant increase in paid-in capital to multilateral development banks, including the World Bank, which will need to operate at a much higher scale. To ensure that existing as well as the required additional financial resources are used for sustainable investments, international finance institutions must fully integrate achieving the SDGs and safeguarding the planetary boundaries into their core mandates, and monitor these for all countries, rich and poor alike. To mobilize the financial means for a strengthened global financial architecture, global taxes to finance climate efforts and the SDGs should also be seriously considered. This idea has recently garnered some momentum, including among some European leaders and at the United Nations.³⁶

7. Re-focus the EU's International Partnerships on the SDGs – Move towards Mutually Transformative Cooperation. After

initially committing to align its development cooperation with the SDGs, various challenges have since led the EU to deliver more shortterm driven, piecemeal responses, with a shift in substantive focus that has brought its own objectives in other policy areas much more to the fore - from the external dimensions of the European Green Deal or the fight against COVID 19 to the Global Gateway Initiative as the hallmark of a 'geopolitical Commission'. The EU has deployed significant financial, humanitarian, and emergency assistance in response to the war in Ukraine, the second-largest developing country in Europe, including creating a 'Ukraine Facility', while the energy crisis has led to a wave of new EU energy partnerships around the globe. Although it is commendable to see budgets being used flexibly to respond to crisis situations, this obviously undermines long-term strategic plans.³⁷ Given the changing global landscape,

it is critical to establish a new Consensus on the EU's international partnerships towards achieving the SDGs.³⁸ In an interconnected world, transformations both within the EU and in its relationships with global partners often depend on each other. Thus, future cooperation must progressively become mutually transformative, giving voice and means to all partners, including as part of the European financial architecture, as well as regarding policy initiatives and developments in the EU that have a significant impact on them.³⁹ In doing so, the EU might live up to its objective of shifting from development cooperation to international partnership, and moving beyond postcolonial patterns of 'donorrecipient relations'. Although budgets may become tighter, the EU should not walk away from its global commitments. The Global Gateway must meet its objective of mobilizing €300 billion by 2027 to support the financing of high-quality, sustainable, and SDG-focused infrastructures worldwide. Furthermore, the EU should follow the call of its High-level Expert Group for a new model for strategic engagement between the EU and partner countries to transform their respective sustainable development challenges into a mutual opportunity.40

8. Mobilize the Financial Means for Transformations toward a Sustainable Future. To finance the European Green Deal and respond to multiple crises and challenges (including the COVID pandemic, migration, the war in Ukraine and the impact of new technologies), the EU has redirected its current seven-year budget and complemented it with the NextGenerationEU financing instrument, the Recovery and Resilience Facility: amounting to a total package of more than two trillion euros.⁴¹ This financial firepower should be reinforced and used to implement the new European Deal for the Future, including enhancing its global dimension. The next Multiannual Financial Framework, for 2028–2035, must integrate, maintain, and even increase the total level of financing to sufficiently fund the required transformation deep into the next decade. Falling back to pre-pandemic budget levels would jeopardize the EU's position as

Europe Sustainable Development Report 2023/24

a global sustainability trailblazer. In terms of its member states, the EU Council has so far reaffirmed the Stability and Growth Pact's reference values of a 3% deficit and 60% of GDP debt level.⁴² This was also reaffirmed by EU finance ministers in December 2023, who also emphasized the importance of incremental fiscal consolidation pathways and the relevance of considering investments in debt sustainability analysis. The EU fiscal rules were not designed to deal with such multiple crises and shocks, which have necessitated long-term and targeted reforms. Current and future reforms, as well as the application of EU fiscal rules for member states, must also support their transformation towards a sustainable future and promote gradual fiscal consolidation, medium-term budget perspectives linked with sustainability pathways, and fiscal transparency.

9. Institutionalize the Integration of the SDGs into Strategic Planning, Macroeconomic Coordination, Budget Processes, Research and Innovation Missions, and Other Policy

Instruments. The next President of the European Commission should ask all new Commissioners to formally outline how they plan to implement the SDGs within their respective areas of responsibility, as the current President did at the beginning of her mandate. The adoption of a European Deal for the Future, with defined targets, timelines, and roadmaps to address environmental and social challenges, would provide clarity on how the EU intends to accomplish the SDGs by 2030, possibly incorporating a longer-term vision and ambitious headline targets for mid-century. As proposed in the EESC opinion on the SDGs adopted at the 25 October 2023 plenary meeting,⁴³ this strategic document could be based on a more operational SDG framework focussing on a set of key transformations already foreshadowed in the European Green Deal and the EU's voluntary review, supplemented by key transformations related to human and social development.44 The next European Parliament and Commission must build on and expand efforts to integrate

the SDGs into various policy processes – including the European Semester (the EU's main instrument for macroeconomic coordination), the Better Regulation agenda, European Parliament resolutions and sustainable investment directives – as well as further leveraging the excellent data and monitoring work conducted notably by Eurostat (including its environmental and ecosystem accounts⁴⁵) as well as the European Environment Agency and the Joint Research Centre. The SDGs should also be central to EU research and innovation strategies, particularly the EU Missions under Horizon Europe.⁴⁶

10. Set up New Permanent Mechanisms for Structured and Meaningful Engagement with Civil Society, Including Youth, and within the European Parliament on SDG Pathways and Policies. The Multi-Stakeholder Platform on the SDGs established for 2017 to 2019 was not renewed by the current Commission, leaving a void for constructive and meaningful dialogue on SDG implementation with civil society, including trade unions, business associations, youth organisations, NGOs, and scientists. The EESC was tasked with channelling and presenting the views of civil society during the preparation of the 2023 EU voluntary review.47 We urge the next Commission to establish, with the EESC, a convening space for regular and structured civil society dialogue – encouraging the participation of companies, trade unions, youth, and grassroots civil society organizations (EESC, 2023b). Such a space could contribute to strengthening the inclusivity of EU institutions and policymaking, while bolstering public support for the SDGs. Fostering dialogue and oversight on integrated SDG policies in the European Parliament will be equally important. Building on the efforts of the informal crossparliamentary SDG Alliance, a special committee on the SDGs and on developing a new European Deal for the Future should be established. The European Parliament should also continue to monitor the EU's progress on the SDGs on an annual basis, via a dedicated resolution.48

Performance of European Countries Against the SDGs

Part 2. Performance of European Countries Against the SDGs

Since 2019, the Europe Sustainable Development Report has presented the SDG Index and Dashboards for Europe and provided an annual overview of the European Union's progress towards the SDGs, as well as the progress of 38 individual European countries (including all EU countries, EU candidate countries, and regional partner countries). The report highlights areas of success as well as opportunities for further improvement and uses the data to compare the progress of European sub-regions. The data and findings build on several rounds of consultations with scientists, experts and practitioners from across Europe, made possible in large part through the strong cooperation between the UN Sustainable Development Solutions Network (SDSN) and the European Economic and Social Committee (EESC).

This year's edition covers the 27 EU member states, 6 EU candidate countries (Albania, Bosnia and Herzegovina, the Republic of North Macedonia, Montenegro, Serbia, and Türkiye), the 4 countries of the European Free Trade Association (Iceland, Liechtenstein, Norway and Switzerland), and the United Kingdom. Georgia, Moldova, and Ukraine are not included in this year's edition due to their recent status as candidate countries and significant data gaps and lags. Detailed country profiles summarize the findings at EU and national levels.

The methodology of the ESDR is based on the global edition of the Sustainable Development Report. This methodology has been peer-reviewed by Cambridge University Press and Nature Geoscience, and statistically audited in 2019 by the European Commission Joint Research Centre.¹ The 2023/24 SDG Index for Europe comprises 109 indicators, derived from official and non-official statistics: for 95 of these, we have been able to evaluate progress made towards the SDG targets over time – from 2015 until the most recent data point available. Annex 1 provides more details about the methodology.

The database and data visualisation portals, as well as other tools and analytics to explore SDG pathways, policies and financing, are accessible on SDSN's SDG Transformation Center portal (www.sdgtransfromationcenter.org).

2.1 The SDG Index score over time

The average SDG Index score of EU countries in 2023 is 72 percent (Figure 1). This highly aggregated average may be sensitive to outliers and does not reflect trends over time. It is therefore also interesting to look at the results in terms of targets achieved or on track to be achieved. Halfway into the SDGs, we estimate that the EU has achieved or is on track to achieve a little over two-thirds of the SDG targets (Figure 2).

The EU average masks important disparities across European sub-regions and countries. The average SDG Index score ranges from more than 80% in some of the Northern European countries to around 60% in some of the Eastern European countries and 50% in some of the candidate countries. Less than one-third of the SDG targets have been achieved or are on-track to be achieved in candidate countries.

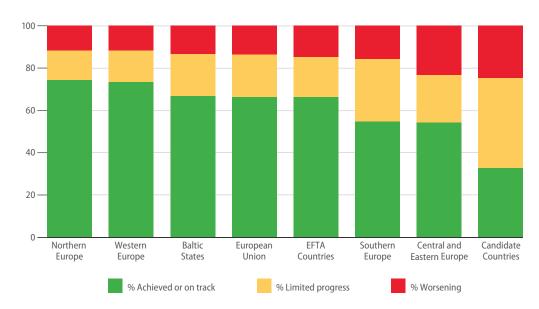

SDG progress in Europe has stalled since 2020. Even before the pandemic hit, progress in the EU was too slow to achieve all of the SDGs by 2030. Still, progress on the SDG Index was three times as fast over the period 2015–2019 (0.73 points per year) than over the period 2019–2022 (0.24 points per year) (Figure 3). Global SDG progress has also stalled since 2020 due to multiple crises, with some of the poorest and most vulnerable regions in the world showing reversals in SDG progress.²

2.2 The 2023/24 SDG index ranking and dashboards for Europe

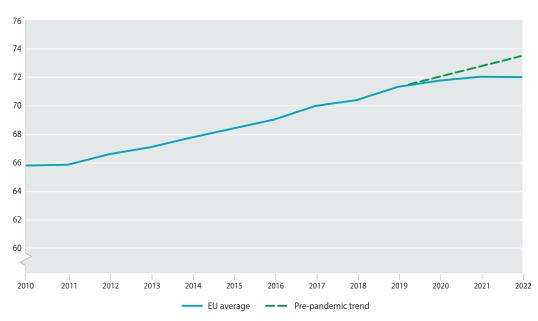

Figure 3 | SDG Progress in the EU and pre-pandemic trend

Note: The pre-pandemic trend projection is extrapolated from the 2015–2019 SDG Index growth rate. Source: Authors

2.2 The 2023/24 SDG index ranking and dashboards for Europe

The 2023/24 SDG Index for Europe is topped by Northern European countries. Finland ranks first for the fourth year in a row, followed by Sweden and Denmark – which all have scores close to or above 80 (out of 100). Finland also topped the 2023 global SDG Index and is, according to the World Happiness Report 2023, the happiest country in the world.³ Yet the SDG dashboards show that even these countries face major challenges (red dashboard rating) in achieving at least two goals.

Building on this year's dashboards and previous editions, we underline five major SDG challenges faced by the EU:

- Multiple crises since 2020, which have led to stagnation and even reversal of progress on Leave-No-One-Behind indicators, especially measuring within-country inequalities
- 2. Persisting challenges related to environmental and biodiversity goals, including sustainable food and land systems (SDG 2, SDGs 12–15)

- 3. Negative impacts from unsustainable consumption and supply chains via international spillover effects
- 4. Large gaps and a slow pace of convergence in SDG outcomes across European countries
- Slow progress: although some headway has been made on SDG goals and targets since 2015, overall progress is too slow to achieve all of the SDGs by 2030 (progress was already too slow even before 2020)

2.3 The Leave-No-One-Behind Index and convergence process in Europe

The SDGs call for addressing inequalities within and across countries. The 'leave no one behind' principle, which is incorporated into the SDGs and the 2030 Agenda, is commonly invoked in reference to inequalities *within* each country. SDG 10 (Reduced inequalities) and SDG 17 (Partnerships for the goals) call for reducing inequalities *across* countries, and for increased partnerships. In Europe and by EU leadership, this is generally referred to as 'convergence'.

Europe Sustainable Development Report 2023/24

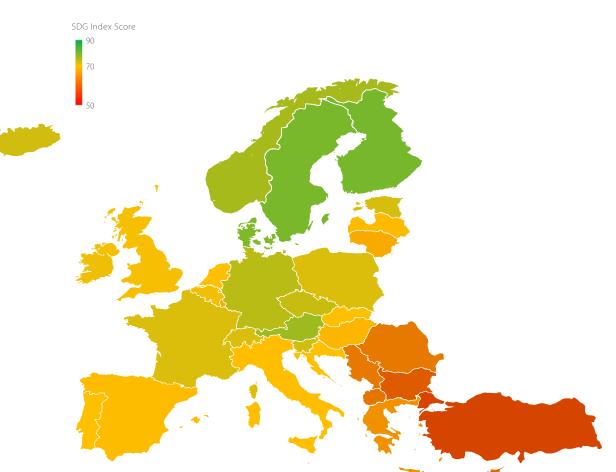

Figure 4 | The 2023/24 SDG Index Scores and Rankings by country

SDG Index Rank	Country	SDG Index Score
1	Finland	80.6
2	Sweden	80.6
3	Denmark	80.0
4	Austria	77.7
5	Norway	77.0
6	Germany	75.4
7	Czechia	74.4
8	Slovenia	73.7
9	lceland	73.7
10	Estonia	73.0
11	Switzerland	72.9

2.3 The Leave-No-One-Behind Index and convergence process in Europe

Source: Authors

Europe Sustainable Development Report 2023/24

The case for addressing both types of inequalities, within and across countries, has been reinforced by the COVID-19 pandemic and by the threats posed by geopolitical tensions and climate change, including rising energy and food prices that disproportionally affect the most vulnerable countries and population groups. The promotion of economic and social convergence among EU member states is at the core of the European project. This is more important than ever in the context of increasing geopolitical tensions and major crises, where EU-wide unity and solidarity are needed for decisive and swift actions.

To measure inequalities within countries, including their evolution over time, SDSN has developed a 'leave no one behind' – or LNOB – index for European countries (Box 1). From a global perspective, the EU is among the most equal regions in the world, offering the most advanced social protection system and universal access to basic services. The European version of the LNOB Index aims to capture persisting gaps and differences across European countries and to identify areas where policymakers must remain vigilant, due for instance to stagnation or reversal of progress in recent years. Northern European countries obtain the highest scores on the 2023/24 European LNOB Index (Figure 6). Norway, Iceland and Finland are at the top of the index, with scores above 85 percent – mainly driven by low levels of income inequality and material deprivation in these countries. On the other hand, stark within-country inequalities are seen in the Baltic States and Central and Eastern European countries, which appear at the bottom of the 2023/24 Europe LNOB Index (with average scores of around 70). EU candidate countries face many difficulties in catching up with Europe in terms of the LNOB index, primarily due to their much higher rates of material deprivation and poverty.

Since the adoption of the SDGs, most European countries have made some progress in terms of the LNOB principle, although progress has stalled on a number of its dimensions since 2019. Central and Eastern European countries have advanced the most overall. Since 2019, however, only the LNOB sub-pillar related to gender equality has shown any significant progress. This shift has been driven by an increasing share of women in parliament and in management positions in many EU countries, including in countries starting from very low levels. Still, no EU country has fully achieved SDG 5 (Gender equality).

Box 1. The Leave-No-One-Behind Index (LNOB)

The LNOB Index measures inequalities within countries. It is composed of a subset of 32 indicators (all also used in the overall SDG Index and Dashboards) and reflects the progress of European countries on four main dimensions of inequality:

- Extreme poverty and material deprivation (e.g. poverty after social transfers, and disparities in health insurance coverage)
- Income inequality and respect for fundamental labour rights
- Gender inequality (e.g. gender pay and employment gaps, under-representation of women in leadership roles in the public and private sectors)
- Access to and quality of services (e.g. disparities across population groups in relation to key services including education and health)

The LNOB index is scored on a scale of 0 to 100, where higher scores represent better performance and therefore less inequality. More information on indicator sources and aggregation is accessible in the Methods' summary section.

2.4 The International Spillover Index

A majority of European countries show no progress, or even a reversal in progress, on three out of four LNOB sub-dimensions (Figure 7). The situation is particularly alarming with regards to 'access and quality of services', where 32 of the 34 European countries covered by the Index show no progress or reversal in progress. This is partly driven by unequal health, education, and safety outcomes across population groups. Even countries that have been performing rather well, however, should remain vigilant to potential reversals of progress on LNOB in 2024, in the context of rising inflation and uncertain geopolitical and economic conditions globally and in Europe. Previous editions of this report have discussed the relationship between LNOB and sustainable development at large.⁴

SDSN and its partners have been documenting territorial inequalities in SDG performance for some years now. The SDG Indices and Dashboards reports for individual cities and regions underline differences in SDG achievements within countries and territories (Figure 8). SDSN Networks have published assessments for Greek, Italian and Spanish cities, and also for cities and regions in Benin, Brazil, Malaysia and the United States, among others.⁵ These tools provide a more comprehensive overview of SDG gaps and challenges at the territorial level.

The spread in performance on certain goals *across* European countries is still significant, suggesting that the convergence process remains too slow (or is driven mainly by large cities). As an example, SDG 9 (Industry, innovation and infrastructure) is at once the goal for which the greatest number of countries score 'green' on the dashboards (very high performance) and the one showing the most 'red' scores (very poor performance). Strengthening EU performance on SDG 9 will be key to improving productivity and living standards across the continent.

2.4 The International Spillover Index

The climate and biodiversity crises are driven by domestic action, but they are also impacted by activities that extend beyond national borders: through trade and other cross-border activities. In addition to environmental spillovers, which are driven by international trade and domestic policies, countries also generate economic, financial, social, and security spillovers.

The 2030 Agenda and the SDGs recognize the importance of international spillovers in several crucial ways. SDG 17 (Partnerships for the goals) calls for 'policy coherence' for sustainable development, SDG 12 (Responsible consumption and production) stresses the need for more sustainable production and consumption, and SDG 8 (Decent work and economic growth) demands the eradication of child labour and modern slavery. The SDSN, working with partners, has from the start incorporated international spillovers in our assessment of countries' progress towards the SDGs. This can explain certain differences in SDG Index results compared with those of other SDG monitoring instruments.6

Compared with other world regions, the EU – and OECD countries in general – tends to generate relatively large negative spillover effects. These are driven primarily by unsustainable supply chains, which lead to deforestation and other negative environmental and social impacts, serving the consumption needs of EU and OECD countries. Figure 10 describes trade-related impacts that can be attributed to specific consumer goods or services across sectors, building on SDSN et al (2023). In some European countries, unfair tax competition, tax havens and shifted profits of multinationals also explain relatively low (poor) international spillover scores.

2.4 The International Spillover Index

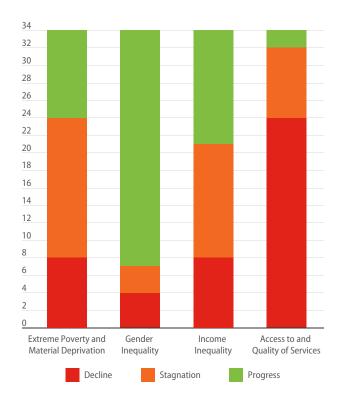

Figure 7 | Number of countries showing decline, stagnation and progress across the four LNOB Index sub-dimensions, 2019-2022

Note: This chart focuses on the period 2019–2022 and covers the 34 countries with sufficient data to produce index scores. We consider a 1 percentage point increase in the LNOB score over the period as 'progress', a score change between – 1 and 1 as 'stagnation', and a 1 percentage point decrease as 'decline'. A 1-point increase for countries starting from very low levels of equality may not reflect rapid progress, however, compared with a 1-point increase in a country starting from higher levels of equality. *Source:* Authors

Curbing trade-related spillovers is a matter of making trade more sustainable and more consistent with the objectives of the Paris Agreement, the Global Biodiversity Framework, the High Seas Treaty and the SDGs – rather than simply restricting trade, which plays such a massive role in enabling developing countries to generate employment and socioeconomic development. Success requires a combination of better metrics and policies in importing countries coupled with support to exporting countries (particularly tropical forest countries) to transition towards more environmentally sustainable technologies and development paths. Both sides – importers and exporters – must work closely together in partnership to tackle this shared challenge.⁷

Since 2017, the SDSN, in collaboration with various partners, has published numerous scientific articles and policy briefs exploring possible policy pathways to curb the negative spillovers generated by specific supply chains and countries.⁸ In September 2023, the *Villars Framework for a Sustainable Trade System*⁹ made eight recommendations for a comprehensive reform agenda for the World Trade Organization and the international trade system.

2.4 The International Spillover Index

Box 2. The international spillover index.

The 2023/24 European Spillover Index comprises 14 indicators that are all included in the overall SDG Index. It measures Europe's progress in reducing environmental and social spillovers embodied in trade, spillovers related to economic and financial flows across countries, and peacekeeping and security spillovers.

SDSN is working with partners to strengthen the availability and timeliness of data on international spillovers, including through flagship initiatives such as the Global Commons Stewardship Index, which measures countries' impacts beyond domestic concerns and specific supply chains studies, focusing for instance on food, textile and minerals.

Conceptually, international spillovers in the context of the SDGs can be grouped into four categories:

- Environmental and social spillovers embodied in trade. These cover international impacts related to pollution and the use of natural resources, as well as social impacts generated by the consumption of goods and services. Multi-regional input–output (MRIO) models, combined with satellite datasets, provide powerful tools to track impacts generated worldwide by consuming countries. This category of spillovers also includes exports of toxic pesticides and the illegal wildlife trade. They are particularly connected to SDG 8 (Decent work and economic growth), SDGs 12 through 15 (related to responsible consumption, climate and biodiversity), and SDG 17 (Partnerships for the goals). They also indirectly affect all other SDGs.
- Spillovers related to economic and financial flows. These include unfair tax competition, corruption, banking secrecy, profit shifting, tax havens and stolen assets, which all undermine the capacity of other countries to leverage resources to achieve the SDGs. They also include positive spillovers (or handprints) such as international development finance (for example, ODA). These types of spillovers are closely related to SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals) and indirectly to all other SDGs, notably through ODA.
- Peacekeeping and security spillovers. These include negative externalities such as organized international crime or exports of major conventional weapons or small arms, which can have a destabilizing impact on poor countries. Among the positive spillovers in this category are investments in conflict-prevention and peacekeeping. These spillovers are particularly related to SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), but also indirectly connected with most of the SDGs, including poverty, hunger and health as well as other socio-economic goals.
- Direct cross-border flows in air and water. These cover effects generated through physical flows for instance of air and water – from one country to another. Cross-border air and water pollution are difficult to attribute to a country of origin, and this remains an important data gap. Unfortunately, the International Spillover Index does not currently include any indicators to track these types of spillovers. They are particularly related to SDG 6 (Clean water and sanitation) and SDGs 12–15 on climate and biodiversity, but they also concern many other goals, including SDG 3 (Good health and well-being).

Further details on indicator sources and aggregation for the International Spillover Index are provided in the methodology annex and online.

Annex 1 Methodology

Annex 1. Methodology

Background

The *Europe Sustainable Development Report 2023/24* provides a quantitative assessment of SDG priorities for the EU, EFTA countries, the UK and candidate countries. The data work was conducted between August and October 2023. Due to their recent accension to candidate-country status in December 2023 and limited data availability for now in European databases, Georgia, Moldova and Ukraine are not covered in this year's edition but may be included in future editions. The 2023 SDG Index and Dashboards for Europe comprises 109 indicators, including 95 that permit an evaluation of progress over time. The same indicator set is used for all countries to generate comparable scores and rankings.

The SDG Index and Dashboards for Europe builds on the methodology of the Sustainable Development Report, developed by the SDSN and Bertelsmann Stiftung to track countries' performance on the 17 SDGs. The methodology has been peer-reviewed by Cambridge University Press¹ and *Nature Geoscience*² and has been statistically audited – during development of the 2019 global edition – by the European Commission Joint Research Centre.³ The SDG Index has been listed among the ten composite indices useful for policymaking by the European Parliamentary Research Service.

This European edition builds on the findings of the 2018 SDSN-EESC study, which called for independent monitoring of SDG performance in Europe.⁴ The report is co-designed by civil society and aims to complement the European Commission's reporting on the SDGs. Since 2016, the European Commission, via Eurostat, has released a dataset for the SDGs and published the annual report *Sustainable Development in the European Union*,⁵ which is the lead SDG monitoring report in the EU. The SDG Index and Dashboards for Europe complements the Eurostat report in five principal ways:⁶

- 1. It measures distance to pre-defined performance thresholds.
- 2. It monitors both *current* performance (latest year available) and *trends* over time.
- 3. It presents results on each of the 17 SDGs for all 27 EU member states, as well as for EFTA countries, the UK and candidate countries.
- 4. It uses more non-official data from peerreviewed papers and civil society.
- It covers extensively the issues of international spillovers and 'leave no one behind' principles (including via dedicated indices).

The selection of indicators and performance thresholds benefited from inputs submitted in various rounds of stakeholder consultations. A kick-off workshop was organized in September 2023, we then launched an online public consultation on preliminary data and results in November 2023, and held a workshop in Brussels on November 8, hosted by the EESC, to discuss the preliminary findings.

Changes to the 2023/24 edition

The Europe Sustainable Development Report 2023/24 covers 38 European countries, including the 27 EU member states and 11 partner countries. This year, the report includes a new indicator issued from geographic information systems (GIS) to better track access to key urban services. This edition also includes updates to the SDG 4 indicators issued from the Programme for International Student Assessment (PISA). These updates incorporate the results of the newly released PISA 2022 and reflect the most recent PISA's focus on mathematics. The 2023/24 report also includes a refinement to the spillover indicator tracking imported GHG emissions (which previously tracked only CO₂ emissions). Our Codebook, available for download online, contains the full list of new and modified indicators as well as all indicator metadata. In addition to the indicator refinements,

we present for the first time an estimation of the percentage of SDG targets that are on track to be met by 2030, for all countries with sufficient data in their respective country profiles.

Data gaps and limitations

Another purpose of this report is to identify data gaps in tracking the SDGs. Compared to other regions, Europe is a data-rich environment. This is due in large extent to the work of the European Statistical System, continued collaboration across National Statistical Offices, and the leadership of the European Commission (via Eurostat). However, despite the strengths of the EU and partner countries in terms of data, there are gaps that need to be filled to track the SDGs at the national level in a comprehensive and timely way. Table A1 summarizes these main data gaps.

Table A1 | Main data gaps in tracking the SDGs in the EU

SDG	Desired metric	SDG	Desired metric
SDG 1	Robust international comparisons of homelessness	SDG 11	Geospatial indicators of access to transports
SDG 2	Resource use efficiency (nutrients, water) Food loss and food waste	SDG 12	Transboundary air pollution flows Environmental impact of material flows
	More timely and better coverage for data	50012	Hazardous Chemicals
SDG 3	on catastrophic health expenditure Government preparedness for pandemics and other critical risks	SDG 13	New registrations of free emissions vehicle Decarbonisation of new marginal gigawatts Headline indicator of climate resilience/
	Student knowledge of sustainable		adaptation
SDG 4	development Quality of tertiary education	SDG 14	Maximum sustainable yields for fisheries Impact of high-sea and cross-border fishing
SDG 5	More timely data on violence against women (including domestic violence and feminicides)		Publicly available annual terrestrial population counts (e.g. for birds and butterflies) and data for other species
SDG 6	Transboundary water pollution flows (e.g. in rivers)	SDG 15	Measures of biodiversity degradation within the EU Measures of biodiversity degradation
	GINI coefficients adjusted for missing top income		abroad stemming from EU imports and supply chains.
SDG 10	Inequalities faced by people with disabilities	SDG 17	Lead internationally comparable indicator of Policy Coherence for Sustainable Development

Source: Authors

Methods summary

Data Sources and Indicator Selection

Approximately 70% of the indicators come from official statistics (primarily services of the European Commission) and 30% from nonofficial data sources (NGOs, academia). The full list of sources by indicator is presented in Table A5. Five major criteria were used to inform the final indicator set for the *Europe Sustainable Development Report*:

- 1. The total number of indicators was limited to 100 (plus or minus 15%).
- 2. Simple, single-variable indicators were preferred, with straightforward policy implications.
- 3. Indicators must allow for high frequency monitoring.
- 4. Indicators must be statistically valid and robust.
- 5. Indicators must allow measurement of distance to targets (it must be possible to define optimal performance).

Method for defining performance thresholds (decision tree)

Performance thresholds ('upper bound') for each indicator were determined using the following decision tree:

- Use absolute quantitative thresholds in SDGs and targets: e.g. zero poverty, universal school completion, universal access to water and sanitation, full gender equality.
- 2. Apply **the principle of 'leave no one behind'** when no explicit SDG target is available.
- 3. When available, use **science-based or technical targets** that must be achieved by 2030 or later (for example, net-zero greenhouse gas emissions from energy by 2050, 80% yield gap closure).
- 4. For all other indicators, use **the average of the top performers**.

The lower bound (0%) was defined by the lowest 2.5th percentile, either from the global Sustainable Development Report or from the European countries included in the Europespecific datasets.

Normalization

To make the data comparable across indicators, each variable was rescaled from 0 to 100, with 0 denoting worst performance and 100 describing the optimum. After establishing the upper and lower bounds, variables were transformed linearly to a scale between 0 and 100 using the following rescaling formula for the range [0; 100]:

$$x' = \frac{x - min(x)}{max(x) - min(x)} * 100$$

where *x* is the raw data value; *max/min* denote the bounds for best and worst performance, respectively; and *x'* is the normalized value after rescaling. Each indicator distribution was censored, so that all values exceeding the upper bound scored 100, and values below the lower bound scored 0. The rescaling equation ensured that higher values indicated better performance. In this way, the rescaled data became easy to interpret: a country with a score of 75 has covered three quarters of the distance from worst to best.

Weighting and aggregation

To compute the SDG Index, we first calculate scores for each goal using the arithmetic mean of the scores of the indicators for that goal. These goal scores are then averaged across all 17 SDGs to obtain the SDG Index score. Equal weights were used for aggregating indicator scores into the goal scores, and for aggregating goal scores into the overall index score.

Averaging across all indicators for an SDG might hide areas of policy concern if a country performs well on most indicators but faces serious shortfalls on one or two metrics within the same SDG (often called the 'substitutability' or 'compensation' issue). As a result, the SDG Dashboards are based only on the two variables on which a country performed worst – except for Goal 3, where the three worst indicators are used. The dashboards use a 'traffic light' colour scheme (green, yellow, orange and red) to illustrate how far a country is from achieving a particular goal. A red rating was applied only if both of the worst-performing indicators scored red. Similarly, in order to score green, all indicators under the goal must be green.

Trends

Using panel data, we estimate how fast a country has been progressing towards an SDG and determine whether – if continued into the future – this pace will suffice to achieve the SDG by 2030. To estimate SDG trends, we calculated the linear annual growth rates needed to achieve the goal (green threshold) by 2030 (2015–2030), which we compared to the average annual growth rate over the most recent period starting from the year of the adoption of the SDGs (e.g. 2015–2022). A green arrow denotes 'on track or maintaining performance above goal achievement', the intermediate yellow and orange arrows denote insufficient progress, and a red arrow indicates movement away from the target. Countries that have already achieved an SDG target, but whose performance has worsened since 2015 are assigned an orange arrow 'stagnation.'

Europe's subregions

The EU aggregate includes the 27 EU Member States and is a population-weighted average. To calculate population-weighted averages for European subregions, countries are grouped as shown in Table A2.

The 2023 International Spillover Index for European countries tracks impacts generated by Europe on the rest of the world. The Index comprises 14 indicators, organized in three categories of international spillovers. The International Spillover Index score is calculated as an arithmetic average of a country's scores on all of the indicators, weighted equally. The score was not generated for candidate countries.

Table A2 | Groupings of European countries by subregion

Baltic States	Central and Eastern Europe	Candidate Countries	EFTA Countries	Northern Europe	Southern Europe	Western Europe
Estonia	Bulgaria	Albania	Iceland	Denmark	Cyprus	Austria
Latvia	Czechia	Montenegro	Liechtenstein	Finland	Greece	Belgium
Lithuania	Croatia	North Macedonia	Norway	Sweden	Italy	France
	Hungary	Serbia	Switzerland		Malta	Germany
	Poland	Türkiye			Portugal	Ireland
	Romania				Spain	Luxembourg
	Slovak Republic					Netherlands
	Slovenia					

Note: Bosnia and Herzegovina is included in the report but is not yet included in the average for candidate countries due to its recent change of status and report production constraints. Georgia, Moldova and Ukraine have similarly only recently attained candidate status and are not yet included in the candidate countries' average. *Source:* Adapted from Euvoc

The Leave-No-One-Behind (LNOB) Index aims to measure countries' efforts to address material deprivation and inequalities across population groups. This year's LNOB index includes a subset of 32 indicators used in the SDG Index, grouped into four categories: poverty and material deprivation; income inequality; access to and quality of services for all; gender inequalities. Each LNOB category is calculated as the arithmetic average of each indicator. The LNOB Index is calculated as an arithmetic average of scores obtained in each category.

Table A5 displays the complete indicator set used for the Europe Sustainable Development Report 2023/24. For the full metadata of all indicators included in the report, please consult the Codebook available online, or our interactive data visualization at sdgtransformationcenter.org.

Table A3 | Spillover indicators and categories

Environmental and social impacts embodied into trade	 Exports of pesticides banned in the EU (kg per 1,000 population) Scarce water consumption embodied in imports (m³/capita) Fatal work-related accidents embodied in imports (per 100,000 population) Victims of modern slavery embodied in imports (per 100,000 population) Imported SO₂ emissions (kg/capita) Imported emissions of reactive nitrogen (kg/capita) Exports of plastic waste (kg/capita) GHG emissions embodied in imports (tCO₂/capita) Marine biodiversity threats embodied in imports (per million population) Terrestrial and freshwater biodiversity threats embodied in imports (per million population)
Economy and finance	 Official development assistance (% of GNI) Shifted profits of multinationals (billion USD)
	Corporate Tax Haven Score (best 0–100 worst)
Security	 Exports of major conventional weapons (TIV constant 1990 million USD per 100,000 population)*

SPILLOVER CATEGORIES SPILLOVER INDICATORS

* The inclusion of an indicator on exports of major conventional weapons should not be interpreted as a value judgment in the context of current conflicts, but rather as an effort to evaluate more generally the trend towards disarmament recognized by the United Nations and by civil society organizations as an important priority for peace, socioeconomic stability, and sustainable development.⁷

Performance by Indicator

nd	SDG 8 – (continued)	Value	Year R	ating	Trend
	Victims of modern slavery embodied in imports (per 100,000 population) In work at-risk-of-poverty rate (%)		2018 2022		•
•	SDG 9 – Industry, Innovation and Infrastructure				
	The Times Higher Education Universities Ranking: Average score of top 3	57.6	2023	•	1
	universities (worst 0–100 best) Patent applications to the European Patent Office (per 1,000,000 population)	150.8	2022	•	1
	Gross domestic expenditure on R&D (% of GDP)		2021	•	$\dot{\mathbf{T}}$
•	Logistics performance index: Quality of trade and transport-related	3.8	2018	•	1
	infrastructure (worst 1–5 best) Households with broadband access (%)	92.4	2022	•	1
	Gap in internet access, urban vs rural areas (p.p.)		2022		$\dot{\mathbf{T}}$
	R&D personnel (% of active population)		2021		1
	Population with at least basic digital skills (%) Articles published in academic journals (per 1,000 population)		2021 2022		•
	SDG 10 – Reduced Inequalities	2.5	2022	•	
•	Gini Coefficient	29.5	2022	•	1
•	Palma ratio		2020		7
•	SDG 11 – Sustainable Cities and Communities				
	Overcrowding rate among people living with below 60% of median equivalized income (%)	28.1	2022	•	1
	equivalized income (%) Recycling rate of municipal waste (%)	46.8	2021	•	1
	Exposure to air pollution: PM2.5 in urban areas (μ g/m ³)	12.6	2019		Ť
•	Housing cost overburden rate (%)	9.1	2022	•	7
•	Population living in a dwelling with a leaking roof, damp walls, floors or foundation or rot in window frames or floor (%)	14.5	2020	•	1
•	Population with access to points of interest within a 15min walk (%)	95.2	2022	•	
	SDG 12 – Responsible Consumption and Production				
	Exports of plastic waste (kg/capita)		2021	•	>
•	Circular material use rate (%) Gross value added in environmental goods and services sector (% of GDP)		2021 2021	•	7
	Production-based SO ₂ emissions (kg/capita)		2018		
•	Production-based emissions of reactive nitrogen (kg/capita)		2018		>
	Imported SO ₂ emissions (kg/capita) Imported emissions of reactive nitrogen (kg/capita)		2018 2018		
	SDG 13 – Climate Action	23.0	2010	•	•
	CO_2 emissions embodied in fossil fuel exports (kg/capita)	133.0	2021	•	
	CO_2 emissions from fossil fuel combustion and cement production (t CO_2 /capita)		2021	•	-
	GHG emissions embodied in imports (tCO ₂ equiv/capita)	5.9	2021	•	$\mathbf{\Phi}$
	SDG 14 – Life Below Water				
,	Bathing sites of excellent quality (%) Fish caught from overexploited or collapsed stocks (% of total catch)		2022 2018		T
	Mean area that is protected in marine sites important to biodiversity (%)		2010		7
	Fish caught by bottom trawling or dredging (%)		2019		$\mathbf{\Phi}$
	Fish caught that are then discarded (%)		2019	•	7
•	Marine biodiversity threats embodied in imports (per million population) SDG 15 – Life on Land	0.5	2018	-	
	Red List Index of species survival (worst 0–1 best)	0.91	2023	•	T.
	Mean area that is protected in terrestrial sites important to biodiversity (%)	78.0	2022	•	÷
	Biochemical oxygen demand in rivers (mg O_2 /litre)	2.5	2020	•	1
	Terrestrial and freshwater biodiversity threats embodied in imports (per million population)	3.9	2018	•	٠
•	Mean area that is protected in freshwater sites important to biodiversity (%)		2022		7
	Nitrate in groundwater (mg NO ₃ /litre)	22.2	2020	•	Τ
•	SDG 16 – Peace, Justice and Strong Institutions	767	2022		
	Press Freedom Index (worst 0–100 best) Corruption Perceptions Index (worst 0–100 best)		2023 2022		~
	Population reporting crime in their area (%)		2022		$\mathbf{\dot{\uparrow}}$
	Death rate due to homicide (per 100,000 population)	0.7	2020	•	1
	Exports of major conventional weapons (TIV constant 1990 million USD per 100,000 population)	1.54	2021	•	•
	Gap in population reporting crime in their area, by income (p.p.)		2020		Ŷ
I	Unsentenced detainees (% of prison population)		2019		→
	Access to justice (worst 0–1 best) Timeliness of administrative proceedings (worst 0–1 best)		2022 2022		J
	Constraints on government power (worst 0–1 best)		2022		÷
	SDG 17 – Partnerships for the Goals				
	Official development assistance (% of GNI)		2022		1
•	Statistical Performance Index (worst 0–100 best) Shifted profits of multinationals (billion USD)		2019		Ť
•	Corporate Tax Haven Score (best 0–100 worst)		2019 2021		•
		1			

7.2 2020 • **↑** Corporate Tax Haven Score (best 0–100 worst)
